

At Home
with
Sam Fowler
of Sea Island Builders

Considered to be the man cave of the house, the game room is Sam's favorite. He notes, "It's a great space to entertain or shoot pool." Dark woodwork and striped furniture blend brilliantly with the outside light streaming in from the floor-to-ceiling windows.

Palm-tree greens and browns create a tropical feel in the master bedroom. With its own private porch facing the water, this room is certainly the most relaxing spot in the house. Mahogany design features complement the décor in the rest of the home.

With a spectacular view of the Intracoastal Waterway, the kitchen is the heart of the home. Unique lighting fixtures maintain the beach ambiance. A coffered ceiling outlines the room with bold simplicity.

"We take a lot of pride in the detail put into designing and building this house," notes Sea Island Builders's Managing Partner and homeowner Sam Fowler. Located on Isle of Palms, it is the winner of HGTV's 2012 Doory Award for Best Beach House. Proving that a waterfront house can also be an architecturally innovative home, this structure fits in flawlessly with the nature of the neighborhood. Fowler nature out, "The house was designed to fit in among the trees." As an active participant in the architectural design and building process, his workmanship is clearly evident. Almost every room incorporates natural wood on the walls and ceilings with a combination of V-groove, shiplap, and reverse-board-and-batten designs. Homemade details, such as custom cabinetry and mahogany doors, add elegance to the entire home. The fresh and modern atmosphere is perfect for escaping the bustling city of Charleston.

Sea Island Builders Goes Green in 2013

SULLIVAN'S ISLAND—Since the start of their company in 2005, Sea Island Builders's main goal has been to construct dream homes for their clients. Now, more than ever before, Sea Island Builders is fulfilling their goal with the added benefit of providing a green approach in their building practices. By using green materials, the company provides their clients with cleaner, more energy-efficient ways to live and also reduces their construction's overall impact on the environment.
